PRINCE & CO.

Linnæan Gardens and Nurseries.

(Founded, 1732.)

FLUSHING, LONG ISLAND, N. Y.

CATALOGUE OF SMALL FRUITS, &C.

SELECT STRAWBERRIES.

All orders are labeled and packed in a superior manner. Strawberry Plants can be packed so as to be sent safely at any season. Parcels can be sent by Mail, if desired, at 16 cts. per lb. If purchasers do not specify, we send by Express. No less than a dozen are sold of any variety, unless otherwise stated in the Catalogue. Persons ordering will please specify the Edition of the Catalogue. Terms, Cash with the order, or collected by Express, on delivery.

Our Catalogues of Fruit and Ornamental Trees, Shrubs, Plants, Grapes, Bulbous Roots, Pæonies, Green House Plants, Seeds, &c., will be sent to applicants who inclose stamps. Also, the Wholesale Catalogue for Nurseries.

The 250 varieties embraced in our entire collection of STRAWBERRIES, including the Newest Foreign Varieties, are fully described in communications from Wm. R. PRINCE, in the Patent Office Report for 1861, and in various periodicals. Full descriptions of the majority of them will also be found in our previous Strawberry Catalogues, and we, therefore, omit them here, except of the New Varieties. Our present collection has been carefully selected from all that have been brought to notice in this country and in Europe. The public taste has become so awakened to the appreciation of the sweet, high-flavored and perfumed varieties of the Strawberry, that such berries as the Wilson, Austin, and the comparatively sour or insipid seedlings grown therefrom, will scarcely be tolerated hereafter. The only seedlings exhibited the two past seasons, possessing sweetness, high flavor and perfume, were grown by Prof. Huntsman, Mr. Heins and ourselves. The majority of the others exhibited were seedlings of the Wilson and Austin, and too acid. We offer a few of our *New Seedlings, with descriptions*, and we guarantee every one of them to be at least equal to any other new seedlings that are offered. We have above 1,000 more under probation, to select from hereafter. Of the following assortment, 50 of the most splendid varieties, designated by an asterisk (*), were originated in our own Nurseries, and selected from thousands of seedlings during the past twenty years. Many varieties are now offered for sale for the first time. The *American Varieties* possess the advantage of great hardihood and productiveness, and are suitable for field culture. Hermaphrodite Varieties should be grown in rows or hills, but Pistillates may be allowed to cover the entire ground. The latter will require one-tenth of

Hermaphrodites to fertilize them, which can be grown in separate proximate beds. As a positive fact, based on physical structure, the Pistillate Varieties of any family will produce 50 per cent. more fruit per acre than Hermaphrodites. H. denotes Hermaphrodites; P., Pistillates. The best periods for planting are March and April, and August to November. We puddle the roots, and don't lose one per cent. In field culture, when planted in rows 2 by 2½ feet, it requires 9,000 plants to an acre. We invite all amateurs to inspect our collection at the fruiting season, it being the most extensive one in existence. They can then judge as to all points, whereas the exhibitions of selected berries are deceptive and do not give the full knowledge desired. We grow our Strawberries for the increase of plants, and without forcing the size of the berries. We refer to Prof. Huntsman, the most intelligent of all our amateurs, as to the great superiority of our collection over all others, and to its precise accuracy.

N. B.—For 50 plants of any variety the price will be 2½ times the price named for a dozen.

English, French, and Belgian Varieties.

These are all of the Pine family (*Fragaria Grandiflora*) up to No. 185, and the most of them are of Belgian origin, and of a much more hardy character than the English varieties which have been heretofore introduced and discarded. They produce large and beautiful berries, mostly with white flesh, and are remarkable for their sweetness, exquisite flavor and perfume, with but two or three exceptions. The *Triomphe de Gand* has become most generally known, but there are numerous varieties greatly superior to it in sweetness and flavor. Being of Tropical parentage, the Pine family require a warm location, a strong, rich soil, and to be cultivated in rows or stools, and kept free from runners. As they combine large size and delicious flavor, they are well worthy the special attention of amateurs. All these are Hermaphrodites.

- 221. **Vilmorin**, very large, crimson, exquisite flavor. For four, \$1.

HAUTBOIS STRAWBERRIES.

This class possesses a high musk flavor, for which they are greatly esteemed. It is called, "The Real Amateurs' Strawberry." All are Hermaphrodites except one Male or Staminate, which should be planted with any that are defective in stamens, in the proportion of one to ten.
